Transactional compliance disposition

Automation reference: Q4HP2P260904DDDD6

Accountable run owner: kiran

If a transactional step fails, execution stops and the resulting SAP state is retained unchanged for compliance review; no automatic reversal is performed.

1.2 Key Results at a Glance

Document	Number	Produced In
Purchase Order	4500069063	Purchase order scenario
Received Quantity	10	See scenario step tables
Material Document (Goods Issue)	5000068660/2026	Scenario 2 — Post Goods Issue
Invoice Amount	150.00	See scenario step tables
Invoice Document Number	5105667175/2026	See scenario step tables

All 3 scenarios were executed as one traceable business-process run. Captured outputs are carried forward by the automation where downstream steps reference them.

2. Process Overview

2.1 Business Narrative

Procure-to-Pay (P2P) is the sequence a company follows from the moment it needs to buy goods to the moment its supplier is paid. It begins when a buyer creates a Purchase Order specifying the supplier, material, plant, quantity, and negotiated net price. Once the goods physically arrive, the warehouse posts a Goods Receipt against the PO, confirming the delivered quantity and creating a Material Document that updates inventory. Finally, Accounts Payable creates a Supplier Invoice referencing the same PO, performs a three-way match (Purchase Order, Goods Receipt, Invoice) to confirm quantities and amounts agree, simulates the posting to catch account-determination or tax errors up front, then posts it to trigger payment.

2.2 Process Flow

2.3 Glossary

Code / Term	Meaning
PO	Purchase Order — the buyer's commitment to purchase specific goods from a supplier
GR	Goods Receipt — the warehouse's confirmation that ordered goods physically arrived
3-Way Match	Verifying the Purchase Order, Goods Receipt, and Supplier Invoice all agree on quantity/amount before payment is released
Std. storage 1	The storage location goods are received into for this plant
Simulate	A dry-run posting check that previews the accounting entries an invoice would create, without actually posting it
Supplier / Invoicing Party	The vendor being paid for the goods
Material Document	The accounting/inventory record created when stock physically moves (e.g., at Goods Receipt)

3. Scenario Chapters

Chapter 1 — Create Purchase Order - Happy Path

Objective: Create a new Standard Purchase Order for the given supplier, ordering the specified material/quantity at the negotiated net price, and capture the resulting Purchase Order number for downstream use.

Preconditions: User is authorized to create purchase orders; the supplier and material are already maintained as master data.

Learning Objectives

- After this section you can create a Purchase Order from the Manage Purchase Orders app through to save.
- After this section you can add a line item specifying material, plant, quantity, and net price.
- After this section you can locate the system-generated Purchase Order number after saving.

Step Table

#	Business Action	Value Entered	Why	Result	Duration
1.1	Created automation reference Q4HP2P260904A853 for kiran	—	Execute the configured automation step	Passed	0.0 s
1.2	Logged into the SAP tenant	—	Establish an authenticated session before the business transaction begins	Passed	58.8 s ⚠ >30s
1.3	Opened the Purchase Order Manage app	App: PurchaseOrder-manage	Open the SAP Fiori application required for this process step	Passed	20.3 s
1.4	Clicked Create	—	Apply or advance the current business action	Passed	0.2 s
1.5	Entered Supplier	USSU-TRL07	Provide the business data required to complete this process step	Passed	19.1 s
1.6	Added 1 line item row	—	Provide the business data required to complete this process step	Passed	11.1 s
1.7	Saved and captured document number 4500069063	—	Execute the configured automation step	Passed	7.5 s

Items (1) Standard

Item	Item Category	Material	Short Text	Material Group	Plant	Order Quantity	Unit of Measure	Price	Price Unit	Net Order Value
10	Standard	TR-TG-Y300	Y300_T Bike	Youth (ZYOUTH)	1710	10	PC	15.00 USD	PC	40.86

Updating draft... Order Discard Draft

Common Errors & Tips *(guidance, not observed failures)*

1. Supplier not authorized for the chosen purchasing organization. The system will flag the document incomplete; verify the supplier master record's purchasing view.
2. Leaving Net Price blank or zero. Some validations allow it but it results in a zero-value PO; always confirm the negotiated price is populated before saving.
3. Selecting the wrong Plant. Line item defaults may not match the intended receiving location; double-check Plant against the storage location you intend to receive into.
4. A typed material code that doesn't match a real master record can leave the row incomplete. Use the value-help dropdown result rather than assuming free-text entry always resolves.

Chapter 2 — Post Goods Receipt for Purchase Order

Objective: Post a Goods Receipt against the Purchase Order created in the previous stage, confirming the delivered quantity into the target storage location, and capture the resulting Material Document number.

Preconditions: The Purchase Order exists and has open (undelivered) quantity; a valid storage location is configured for the receiving plant.

Learning Objectives

- After this section you can search the Post Goods Receipt app by Purchase Order number.
- After this section you can confirm the delivered quantity for each open line item.
- After this section you can post the goods receipt and capture the resulting Material Document number.

Step Table

#	Business Action	Value Entered	Why	Result	Duration
2.1	Created automation reference Q4HP2P2609043640 for kiran	—	Execute the configured automation step	Passed	0.0 s
2.2	Opened "Post Goods Receipt for Purchasing Document" from the App Finder	—	Execute the configured automation step	Passed	13.9 s
2.3	Searched Goods Receipt for PO 4500069063	—	Execute the configured automation step	Passed	5.0 s
2.4	Received line item(s) — quantity 10	—	Execute the configured automation step	Passed	0.8 s
2.5	Selected storage location	Std. storage 1	Provide the business data required to complete this process step	Passed	1.2 s
2.6	Clicked Post	—	Apply or advance the current business action	Passed	0.6 s
2.7	Captured Material Document Number	5000068660/2026	Record the generated value for audit traceability and downstream use	Passed	2.7 s

SAP

Post Goods Receipt for Purchasing Document

All

Search or Launch App

Purchasing Document:

Scan a barcode

Enter a purchasing document,
supplier, plant, or a plant name

Success

1 document(s) created:

Material Document 5000068660/2026

OK

Common Errors & Tips *(guidance, not observed failures)*

1. The storage location must be selected explicitly (this app requires a value-help pick, not free-text) — the Post button stays disabled without it.
2. Delivered Quantity greater than the open PO quantity. The system either blocks the posting or flags an over-delivery warning; confirm quantity against the PO's own open balance first.
3. Searching by an already-consumed Purchase Order shows no open line items. This usually means the PO has already been fully received, not that the search failed.
4. The Post action can silently fail to update inventory if the material lacks a valid batch/serial profile it requires. Check the message log at the top of the screen if the confirmation dialog doesn't appear as expected.

Chapter 3 — Post Supplier Invoice (3-Way Match)

Objective: Create a Supplier Invoice referencing the Purchase Order, match it to the PO and Goods Receipt (3-way match), simulate the posting, then post it and capture the resulting invoice document number.

Preconditions: The Purchase Order exists and has a completed Goods Receipt against it; the invoicing party (supplier) is authorized to bill against this PO.

Learning Objectives

- After this section you can create a Supplier Invoice header referencing a Purchase Order.
- After this section you can assign PO line items to the invoice and match the gross amount to the PO reference.
- After this section you can simulate an invoice posting before committing it, and capture the resulting document number.

Step Table

#	Business Action	Value Entered	Why	Result	Duration
3.1	Created automation reference Q4HP2P260904DDD6 for kiran	—	Execute the configured automation step	Passed	0.0 s
3.2	Opened the Supplier Invoice Create app	App: SupplierInvoice-create	Open the SAP Fiori application required for this process step	Passed	0.0 s
3.3	Dismissed "No" dialog if present	—	Handle an optional confirmation without changing the business outcome	Passed	8.4 s
3.4	Entered Invoicing Party	USSU-TRL07	Provide the business data required to complete this process step	Passed	2.8 s
3.5	Entered Invoice Date	09/04/2026	Provide the business data required to complete this process step	Passed	0.8 s
3.6	Entered Reference	Q4HP2P260904DDD6	Provide the business data required to complete this process step	Passed	0.9 s
3.7	Assigned PO 4500069063's open items to the invoice	—	Execute the configured automation step	Passed	30.5 s ⚠ >30s
3.8	Matched Gross Amount = 150.00	—	Execute the configured automation step	Passed	15.0 s
3.9	Dismissed "Yes" dialog if present	—	Handle an optional confirmation without changing the business outcome	Passed	5.0 s
3.10	Ran Simulate check on the invoice	—	Execute the configured automation step	Passed	12.9 s
3.11	Clicked Post	—	Apply or advance the current business action	Passed	0.2 s
3.12	Captured Supplier Invoice Number	5105667175/2026	Record the generated value for audit traceability and downstream use	Passed	4.3 s

Fig 3.9 — Supplier Invoice Number = 5105667175/2026. Captured automatically during Scenario 3.

Common Errors & Tips *(guidance, not observed failures)*

1. Invoice Date left outside the allowed open posting period. The system will reject posting with a period-closed error; use today's date unless backdating is specifically required.
2. Gross Amount not matching the PO/GR value. The 3-way match will show a variance warning; either correct the amount or confirm the variance is expected before proceeding.
3. Skipping Simulate before Post. Simulation surfaces account-determination and tax errors before they become a failed posting; always simulate first.
4. An unexpected confirmation dialog (e.g. a duplicate-invoice warning) can block the flow if not dismissed. Check for and dismiss any warning dialog before assuming the next step failed.

4. Traceability & Results Matrix

4.1 Input / Output Table

Field	Type	Value	Produced / Consumed In
automationOwner	Input	kiran	Execution input

invoiceAmount	Output	150.00	See scenario step tables
invoiceDocumentNumber	Output	5105667175/2026	See scenario step tables

5. Training Supplement

5.1 Hands-On Practice Exercise

Repeat the full flow using the same master data as this run:

Field	Value to Use
Supplier	USSU-TRL07
Material	TR-TG-Y300
Plant	1710
Quantity	10
Net Price	15.00
Delivered Quantity	10

5.2 Checkpoints

1. Stage 1 — Create Purchase Order: write down the Purchase Order number the system assigns you; you'll need it for Stage 2 and Stage 3.
2. Stage 2 — Post Goods Receipt: write down your new Material Document number.
3. Stage 3 — Post Supplier Invoice: write down your new Supplier Invoice number, and confirm the 3-way match showed no unexplained variance before posting.

5.3 Self-Check Quiz

Q1. What does a 3-way match actually compare?

The Purchase Order, the Goods Receipt, and the Supplier Invoice — confirming quantities and amounts agree across all three before payment.

Q2. Why post a Goods Receipt before the Supplier Invoice?

The invoice's 3-way match needs a Goods Receipt to compare against; posting the invoice first would have nothing to match.

Q3. What is the purpose of "Simulate" before posting an invoice?

It previews the accounting entries and surfaces account-determination or tax errors before you actually commit the posting.

Q4. True or False: entering a Delivered Quantity larger than the PO's open quantity is always silently accepted.

False — the system either blocks the posting or raises an over-delivery warning, depending on configuration.
